MFS 3000 T.I.

The Tri-flo MFS 3000 T.I. comes equipped with our 8-4 Mudcleaner over our 8' Double deck PTP shaker. This system is capable of processing up to 520 GPM and achieves a cut point of 25 microns. With an inline hopper and plenty of deck space on top of the system you can easily mix your mud in a clutter free work environment. Adjust our shaker on the fly with our hydraulic lift system for more retention time across the shaker if necessary and maintain proper header pressure with individual valves for each cone. This is a turnkey system with everything you need to pull on site and start working.
